WALTHER STRONG®

Walther Strong DPM Butyl Tape is a high performance jointing tape designed to create a continuous damp proof and airtight seal between two sheets of plastic membrane. Ideal for situations where membrane joints are unavoidable or where the membrane must be sealed around service penetrations and protrusions.

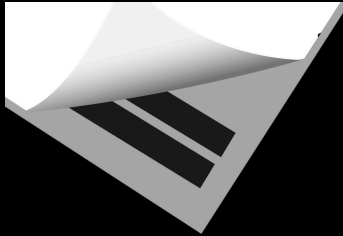

Manufactured from premium butyl rubber, this tape offers excellent adhesion to all damp proof membranes and ensures long lasting protection against moisture ingress. Its flexibility allows for easy application even on irregular surfaces, helping to maintain the integrity of the barrier in demanding environments.

1 - PREPARE SURFACE

[Remove all debris & dust]

2 - APPLY FIRST SIDE OF TAPE

[Apply (with backing) to the first membrane making sure the membrane is flat with no creases]

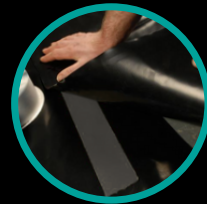

3 - PRESS FIRMLY

[Apply firm pressure along tape]

4 - APPLY SECOND MEMBRANE

[Remove backing tape & apply second DPM membrane to tape]

- Completely airtight
- Code compliant
- Durable
- Compatible with all damp proof membranes
- Highly effective damp proof seal
- Ideal for membrane joints and around penetrations
