# WALTHER STRONG®

HD Sleeper Tape is the ultimate protection for hardwood and softwood railway sleepers, especially incised and rough timbers. Moisture is the biggest enemy of timber, leading to decay even in treated wood. This tape features a specialist M50+ rubber morphing adhesive that moulds perfectly to uneven surfaces, creating a 100% waterproof barrier—even when screwed through.

Ideal for landscaping projects that require longevity, HD Sleeper Tape completely prevents sleepers from rotting when in contact with soil, significantly extending their lifespan. It is also completely non-toxic, making it safe for organic gardens and raised vegetable beds.

## STEP 1

Cover the side and base of the sleeper that's in contact with soil / bark

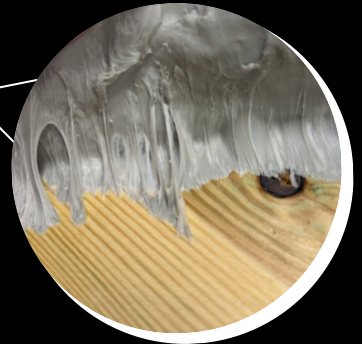

## STEP 2

Take the backing off and apply pressure to the tape to start the bonding process

## STEP 3

Add your soil or bark
