WALTHER STRONG®

Fixing UPVC trims can be tricky. UPVC has a smooth surface that makes it hard for most adhesives to stick properly. On top of that, these trims are often used outdoors, where harsh weather and sunlight can break down adhesives.

Walther Strong has developed a 20mm Trim Tape to solve this common problem. Made with black, UV stable, exterior-grade polyethylene foam and a hybrid adhesive, it bonds securely to UPVC even in tough conditions. It's completely UV-stable, so it won't crack or fail under sunlight, giving you a reliable, long-lasting hold for your trims.
